

LINEO 500

FLUSH-MOUNTED LINEAR DIFFUSER

Flush-mounted linear ventilation system diffusers are designed for installation in plasterboard ceilings and walls. Once installed, the diffusers are plastered and painted the same colour as the ceiling or wall, leaving only a minimal visible slit that becomes an interior design element.

LINEO 500 diffusers are designed for flexible plastic duct systems with a 75 mm diameter. They can be mounted vertically or horizontally and feature a compact design, requiring only 12 cm of installation space, making them ideal for saving space beneath plasterboard ceilings. They are also suitable for installation in 12 cm thick partition walls.

The connection box and diffuser base are made of PVC, while the grille is powder-coated black, and the duct connections are made from antistatic PP plastic.

LINEO 500/75 SINGLE features an airflow balancing damper, conveniently adjustable from the outside. The LINEO 500 model includes two rear duct connections, which are supplied with the unit.

Model	Number of slots	Length, mm	Weight with/without packaging, kg	Code
LINEO 500/75 SINGLE	1	500	3.4/2.96	1255609
