

MKRT, MKRTN

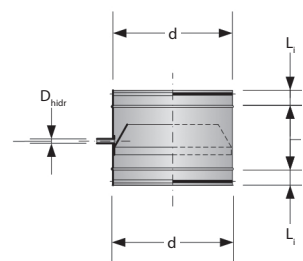

Coupling for condensate drainage

Coupling for condensate drainage MKRT-d is used to avoid condensation in duct system. Condensation on the inside walls of the duct are caught by a special cone inside coupling which directs all condensed water towards drainage collecting tank. Coupling for condensate drainage can be assembled only in vertical position.

Couplings are made from galvanized sheet metal with insertable to duct connections.

MKRT-d galvanized steel.

MKRTN-d stainless steel.
